DANIEL DAVID OJEDA

Software Engineer · Backend & Full Stack · Software Engineering Student

Bogotá, Colombia · +57 314 443 6688 · danielgamier1@gmail.com · github.com/dlanmi · Portfolio

PROFESSIONAL SUMMARY

6th-semester Software Engineering student (evening program) with hands-on experience building complete systems in **TypeScript/Node.js and Python**: event-driven architectures, API and real-time data integration, Dockerized microservices and automated testing. Internship experience in React frontend development and API integration at PBS Group, and founder of my own e-commerce store. Self-driven, rigorous about code quality and eager to grow within an engineering team.

SKILLS

Languages: TypeScript, JavaScript, Python, Java, SQL
Backend: Node.js, FastAPI, RESTful APIs, WebSockets, event-driven architecture, SQLite, Firebase, Docker
Frontend: React, HTML, CSS, responsive design, Astro
Quality: automated testing (Vitest, Pytest), strict typing, logging and monitoring, Git/GitHub, Scrum
Data & AI: pandas, NumPy, scikit-learn, NLP models (FinBERT), automation with Make, n8n and Vapi
Languages spoken: Spanish (native), English (B2)

FEATURED PROJECTS

Algorithmic Trading & Paper Trading Platform — Personal project *2026*
TypeScript · Node.js · Python · FastAPI · Docker · SQLite · Vitest

- Designed an **8-module event-driven architecture** (data → signals → risk → execution) in strict TypeScript: ~7,700 lines with **120+ unit tests**.
- Integrated a real-time Coinbase **WebSocket** feed with OHLCV bar aggregation, an append-only SQLite journal, an HTTP health check and feed-outage alerts.
- Built a risk layer with **7 pre-trade checks**, a kill switch and a daily-loss circuit breaker; execution is swappable through an adapter (simulated or devnet).
- Developed a **FastAPI + Docker microservice** serving an NLP model (FinBERT) for news sentiment analysis, consumed by the bot through a typed interface.

futpred — Sports Prediction Engine (soccer & tennis) — Personal project *2026*
Python · pandas · SciPy · scikit-learn · SQLite · Pytest

- Installable Python package with a CLI: **57 modules, ~6,200 lines and 137 automated tests**; reproducible ingest → normalize → model → evaluate pipeline.
- Ingests 5+ external data sources and APIs into SQLite, with immutable snapshots and team-name canonicalization.
- Statistical model (Dixon-Coles) + ML meta-model; on **79 real 2026 World Cup matches it was 65% accurate**, outperforming an Elo baseline.

WORK EXPERIENCE

Software Development Intern — PBS Group *Aug 2025 – Mar 2026*

- Validated and integrated RESTful APIs and supported system testing, ensuring data flowed correctly across platforms.
- Built frontend features with React and maintained existing web pages.
- Automated business processes and built voice-bot conversational flows with Vapi, Make and n8n.

AI Data Annotator — micro1 *Remote*

- Critically evaluated large language model (LLM) outputs, flagging errors and inconsistencies with written justifications under strict quality guidelines and deadlines.

ENTREPRENEURSHIP & OTHER PROJECTS

Founder — Astrobear (Shopify e-commerce store)

- Designed, built and ran an online store end to end: conversion optimization, social media campaigns (one video reached **2.5M+ views**) and the shift from dropshipping to in-house production.

Other web projects

- Bowies Club NFT collection website (React) · AI self-driving car (JavaScript) · Portfolio website.

EDUCATION

B.S. in Software Engineering — Fundación Universitaria Compensar, Bogotá *In progress · 6th semester (evening program)*
Health Services Administration — Fundación Universitaria de Ciencias de la Salud, Bogotá *Completed*

CERTIFICATIONS & AWARDS

- **Uber Global Hackathon — Regional Winner**, Uber (Sep 2022)
- CS50: Intro to Computer Science — Harvard (edX)
- Full Stack JavaScript Developer — Platzi (Jul 2023)
- Java Fundamentals & Database Design — Oracle Academy
- Python for Everybody — University of Michigan (2022)
- Google Data Analytics — Google (Coursera)
